Do you have a need to innovate, to radically re-think the future and to bridge the gaps?

The College of Architecture + Planning is excited to offer a Minor in Multi-Disciplinary Design starting Fall 2010. This plan of study was developed for undergraduate students who want to understand the creative process from idea to product. Who are interesting in crafting products and ideas that solve both individual and collective problems.

This new Interdisciplinary Design minor will encourage creative problem solving through an empathetic lens and reinforce learning by doing. It will train students to compete in increasingly difficult and complex markets and provide tools to tackle illdefined problems. In addition, it will provide students with the background to move on to multiple design professions and broaden their educational experience so that they can become leaders.

Starting Fall 2010 17 Credit hours
